

Sankar Innamuri

sankar.innamuri@outlook.com

P: (813) 304-3903

Professional Summary:

- Cybersecurity Analyst with **7+ years of experience** in SOC operations, SIEM monitoring, incident response, detection engineering, cloud security, vulnerability management, and threat hunting across enterprise environments.
- Proven success in **24x7 Security Operations Center (SOC)** environments, triaging high-volume alerts, validating true positives, escalating critical incidents, and supporting containment within defined SLAs.
- Hands-on expertise across the **incident response lifecycle**, including alert investigation, triage, impact analysis, containment support, root cause analysis, documentation, and incident closure.
- Strong experience with **SIEM platforms**, including **Splunk, Microsoft Sentinel, QRadar, and Google SecOps** for real-time monitoring, correlation analysis, log investigation, dashboarding, and threat detection.
- Hands-on experience securing **AWS and Azure** environments, including cloud log monitoring, suspicious activity analysis, identity investigations, and validation of security misconfigurations.
- Familiar with cloud-native security services such as **AWS CloudTrail, GuardDuty, Security Hub, Azure AD, Microsoft Defender for Cloud, and Microsoft Sentinel** for cloud visibility and threat detection.
- Experienced in **identity and access security**, including monitoring privileged access, suspicious logins, MFA anomalies, account compromise indicators, and lateral movement attempts.
- Skilled in **detection engineering and alert tuning**, developing and refining correlation rules and use cases to improve detection coverage and reduce false positives.
- Proficient in analyzing telemetry from **endpoints, servers, firewalls, email gateways, Active Directory, cloud platforms, and network devices** to identify anomalous activity and support investigations.
- Experienced in **threat hunting** using **IOC-, TTP-, and behavior-based methodologies** across endpoints, identity, email, and network telemetry to detect hidden threats proactively.
- Skilled in SOAR and security automation, streamlining alert enrichment, IOC analysis, incident routing, and response workflows to improve SOC efficiency and reduce manual triage effort.
- Strong understanding of the **MITRE ATT&CK framework**, with practical experience mapping attacker techniques to detect detections, hunt queries, incident findings, and defensive monitoring use cases.
- Strong background in **vulnerability management**, including vulnerability identification, validation, prioritization, remediation tracking, and coordination with infrastructure, endpoint, and application teams.
- Hands-on experience with **Nessus, Qualys, Tenable, CrowdStrike, Microsoft Defender, and Carbon Black** to assess exposure, validate findings, and support remediation of critical vulnerabilities.
- Good knowledge of security and compliance frameworks, including **ISO 27001, NIST, PCI-DSS, HIPAA, and SOC 2**, aligning operational security practices with control requirements and audit expectations.
- Experienced in supporting **audit readiness, control validation, security documentation, policy adherence, and evidence collection** to strengthen governance and compliance posture.
- Working knowledge of **penetration testing concepts and security validation**, including vulnerability verification, basic web application security testing, and remediation validation.
- Solid understanding of **network security operations**, including **IDS/IPS, firewall analysis, suspicious traffic investigation, lateral movement indicators, and network-based threat detection**.

Education:

- Master’s in computer science and engineering from the University of South Florida
- Bachelor's in Electronics and Communication Engineering from GITAM University

Certifications:

1. AWS Certified Security - Specialty (SCS-C03)
2. GIAC Certified Incident Handler (GCIH)
3. Azure Security Engineer Associate (AZ-500)

Technical Skills:

SIEM	Splunk ES, Microsoft Sentinel, IBM QRadar, SPL/KQL queries; dashboards, correlation rules, alert tuning
EDR	CrowdStrike Falcon, Sentinel One, Microsoft Defender for Endpoint, Carbon Black
Threat Hunting	MITRE ATT&CK mapping, hypothesis-driven hunts, detection gap analysis, and lateral movement
Vulnerability Management	Nessus, Qualys; remediation tracking and risk prioritization
Cloud Security	Microsoft Defender for Cloud, Azure ID/Entra ID, AWS CloudTrail, AWS GuardDuty.
Identity & Access Security	Azure AD (Microsoft Entra ID), Okta, Duo Security, CyberArk, SailPoint
SOAR/Automation	ServiceNow: playbooks/runbooks, automation, response orchestration
Network security tools:	DS/IPS, Firewalls, VPN, Proxy Logs, TCP/IP, DNS, HTTP/S, TLS, Wireshark, network traffic analysis
Standards & Governance	NIST framework, incident response lifecycle, audit-ready documentation, stakeholder communication, compliance support (ISO 27001, PCI-DSS, HIPAA)
Email Security	Proofpoint, Secure Email Gateway, phishing analysis, email header analysis, malicious URL, and attachment review

Professional Experience:

Amazon – Dallas, TX

Jan 2024- Present

Role: Senior Cybersecurity Analyst | Cloud Security

Responsibilities:

- Monitored and triaged **700+ weekly security alerts** across enterprise and cloud environments using **Splunk, Microsoft Sentinel, and EDR telemetry**, prioritizing high-risk events based on business impact.
- Led investigations for **phishing, endpoint threats, privilege misuse, suspicious authentication patterns, and anomalous cloud activity**, coordinating timely escalation, containment, and recovery.
- Managed **high-priority incident response** activities, including triage, scope validation, evidence review, impact assessment, root cause analysis, and documentation in line with SLA requirements.
- Reviewed **AWS and Azure** telemetry from **CloudTrail, GuardDuty, Security Hub, Azure AD, and Defender for Cloud**, investigating **300+ cloud alerts monthly** for unauthorized access and control deviations.
- Investigated **hybrid identity and access security events**, including suspicious logins, impossible travel, MFA anomalies, and privileged account misuse, improving visibility across **500+ user accounts**.
- Partnered with **cloud, IAM, infrastructure, and application teams** to remediate control gaps and implement **50+ security improvements**, strengthening monitoring coverage and reducing security risks.
- Assessed cloud resources for **misconfigurations, excessive permissions, exposed services, and weak access**

controls, driving remediation of **100+ security findings** and improving overall security posture.

- Developed and tuned **SIEM correlation rules, analytics, and alert logic** across **Splunk and Sentinel**, reducing false positives by **30%** and improving investigative efficiency for the SOC.
- Correlated telemetry from **endpoints, Active Directory, firewalls, email gateways, servers, and cloud platforms** to identify malicious patterns and strengthen enterprise monitoring coverage.
- Performed proactive **threat hunting** using **IOC, TTP, and behavior-based methodologies** across endpoints, identity, cloud, and network data sources to identify stealthy adversary activity.
- Mapped investigation findings and hunt results to the **MITRE ATT&CK framework**, improving detection maturity, adversary visibility, and consistency in reporting and use-case development.
- Validated and prioritized vulnerabilities identified through **Nessus, Qualys, and Tenable**, supporting remediation of **250+ critical and high-risk findings** through risk-based coordination with internal teams.
- Supported **ISO 27001, NIST, PCI-DSS, and HIPAA** control alignment by contributing to audit evidence, control validation, and security documentation to strengthen enterprise compliance posture.
- Reviewed **IDS/IPS and firewall events** to identify suspicious network activity, support investigations, and improve visibility into threats affecting enterprise risk posture

Environment: AWS, Azure, AWS CloudTrail, GuardDuty, Security Hub, Azure AD, Microsoft Defender for Cloud, Microsoft Sentinel, Splunk, CrowdStrike Falcon, Carbon Black, Active Directory, IAM, MFA, ServiceNow, Qualys, Nessus, Tenable, IDS/IPS, Firewalls, MITRE ATT&CK, NIST, ISO 27001, PCI-DSS, HIPAA.

Walmart- Bentonville, AR

Jan 2023 – Nov 2023

Role: Cybersecurity Analyst

Responsibilities:

- Triaged and investigated **12,000+ security alerts** in a fast-paced SOC using **Splunk, Carbon Black, and cloud security logs**, ensuring timely escalation and containment of high-risk incidents.
- Performed in-depth **endpoint investigations** using **Cisco Carbon Black** to analyze process trees, command-line activity, binary reputation, persistence mechanisms, and lateral movement behaviors.
- Leveraged **Splunk** to correlate endpoint, authentication, network, and cloud telemetry, improving detection accuracy and reducing analyst investigation time by **35%**.
- Supported response activities for **phishing, malware, credential misuse, suspicious PowerShell execution, and unauthorized access events**, helping contain threats within defined SLA timelines.
- Tuned alert logic, refined correlation rules, and suppressed noisy detections, contributing to a **45% reduction in false positives** across recurring SOC alert categories.
- Investigated and remediated **500+ phishing and email-based threats** by analyzing message headers, embedded URLs, malicious attachments, and sender behavior, reducing user exposure to compromise.
- Built and supported **SOAR workflows** for alert enrichment, IOC lookups, ticket creation, and incident routing, reducing manual triage effort by **40%** and improving response consistency.
- Reviewed **AWS CloudTrail, GuardDuty, Azure AD, and platform activity logs** to identify anomalous sign-ins, risky IAM changes, exposed configurations, and unauthorized access attempts.
- Collaborated with **IAM, infrastructure, email security, and endpoint teams** to remediate control gaps and implement **60+ corrective actions**, reducing repeat security issues across monitored environments.
- Conducted proactive **threat hunting** across Splunk and Carbon Black using **IOC- and behavior-based searches**, identifying hidden suspicious activity and improving visibility into attacker techniques.
- Supported **vulnerability management** by reviewing scan findings, prioritizing critical vulnerabilities based on asset value and exploitability, and coordinating remediation with infrastructure teams.
- Validated remediation of security gaps across **endpoints, servers, and externally exposed systems**, contributed to a **25% improvement in critical vulnerability closure rates**.

- Analyzed **network traffic and security events** to identify suspicious connections, C2C indicators, and anomalous communication patterns, supporting faster investigation of potential compromise.

Environment: Splunk, Cisco Carbon Black, SOAR, AWS CloudTrail, Amazon GuardDuty, Azure AD, Microsoft Azure, Nessus, Qualys, Proofpoint, Microsoft Defender, Wireshark, ServiceNow, Jira, KQL, MITRE ATT&CK, NIST, ISO 27001, PCI-DSS, HIPAA.

Wipro Technologies/HCA Healthcare - India

Jan 2019 - Jul 2021

Role: SOC Analyst

Responsibilities:

- Monitored and triaged **800+ security alerts weekly** across endpoints, servers, email, network, and user activity logs, ensuring timely investigation and escalation in a **24x7 SOC** environment.
- Investigated **phishing, malware, suspicious logins, privilege misuse, and endpoint compromise** incidents using SIEM and endpoint telemetry, supporting timely containment and remediation actions.
- Performed security monitoring and log analysis using **Splunk and QRadar**, correlating events across multiple data sources to improve incident visibility and reduce investigation gaps.
- Supported response efforts for **400+ phishing and email security incidents** by reviewing headers, embedded URLs, malicious attachments, and sender reputation across enterprise environments.
- Conducted endpoint investigations using **EDR and security tools** to review suspicious processes, command-line activity, persistence mechanisms, and indicators of lateral movement.
- Tuned alert logic and refined detection rules for recurring SOC use cases, contributing to a **30% reduction in false positives** and improving analyst efficiency during high-volume monitoring.
- Reviewed vulnerability scan results from **Nessus and Qualys**, prioritized critical findings based on risk and asset exposure, and supported remediation of **200+ high-risk vulnerabilities**.
- Monitored **IDS/IPS, firewall, and network security events** to identify suspicious connections, abnormal traffic patterns, and potential command-and-control activity affecting enterprise systems.
- Supported **SOAR-driven alert enrichment and incident routing** by validating IOC lookups, automating repetitive triage steps, and improving response consistency across recurring SOC investigations.
- Maintained detailed **incident records, escalation notes, root cause findings, and audit evidence** in ticketing systems, supporting compliance readiness aligned with **NIST, ISO 27001, HIPAA, and PCI-DSS** requirements.

Mastercard – India

Jan 2017 - Nov 2018

Role: Information Security Analyst

Responsibilities:

- Monitored and reviewed security alerts across **endpoints, servers, email, firewall, and user activity logs**, supporting timely identification and escalation of suspicious events in a SOC environment.
- Assisted in investigating **phishing, malware, suspicious logins, unauthorized access attempts, and policy violations**, helping support containment and remediation of security incidents.
- Performed log analysis using **SIEM platforms** to correlate events from **Active Directory, VPN, firewalls, proxy, and email gateway systems**, improving visibility into potential threats.
- Supported **phishing and email security investigations** by reviewing email headers, embedded URLs, attachments, sender reputation, and user impact to reduce exposure to malicious emails.
- Conducted basic **endpoint security investigations** using EDR and security tools to analyze suspicious processes, command-line activity, and possible malware indicators on user systems.
- Assisted with **vulnerability management activities** by reviewing findings from **Nessus and Qualys**, tracking remediation status, and coordinating with support teams on critical issues.
- Monitored **IDS/IPS and firewall events** to detect suspicious connections, abnormal traffic patterns, and potential unauthorized communication affecting enterprise assets.
